# ENGINEERING

# **ABOUT THIS SECTOR**

The strength of UK manufacturing is supported by extensive R&D and investment in capital infrastructure. The movement towards more automation and digitisation creates significant opportunities for tax reliefs and incentives for the taxpayer in this sector.

# **POTENTIAL R&D CLAIMS**

Many companies are conducting qualifying R&D activities for R&D tax relief purposes in this sector on a daily basis without even realising it. What may seem as typical day-to-day challenges in the office and field may qualify. This may include developing new products, processes or services or duplicating existing products and processes in an appreciably improved way. The development does not have to be blue sky innovation, however, it is necessary for the company to demonstrate some kind of technical uncertainty in the work being undertaken. Typical examples within this sector include but are not limited to;

- The development of a machine with a robotic arm which could handle extremely small components at a very high output speed.
- The development of an engine piston which had to be small enough to fit within extremely tight dimensions with virtually zero tolerance.
- The development of a nitric oxide and nitrogen dioxide burner for use in power stations which reduced emissions to below the level set by EU directives.

### POTENTIAL PATENT BOX CLAIMS

Companies that hold patents could qualify for a reduced effective corporation tax rate of 10% on profits derived from those patents.

Any company in this sector which does not hold a patent should be reviewing their technological developments to consider their eligibility to apply for a patent and benefit from the significantly reduced 10% tax rate.

The technical hurdle to apply for a patent is not as high as you may think. Similar to R&D tax relief, what may seem as typical technology in the office or field may be patentable and eligible for a 10% effective rate of tax.

Some examples of patents in this sector include but are not limited to;

- Patented ground penetration device developed for sampling soil.
- Various seals used in pumping equipment.
- A patented component used to reattach broken barbed wire fences.
- A patented toilet flush which reduces water consumption and noise disturbance.

# POTENTIAL CAPITAL ALLOWANCE CLAIMS

Capital allowances enable commercial property owners to obtain tax relief relating to capital expenditure embedded within their building.

Capital allowances on plant and machinery items will typically be claimed in the tax computation already.

However, many businesses in this sector are missing out on valuable capital allowances available not only on commercial property owned for years, but also on the;

- Acquisition
- Construction
- Refurbishment; or
- Extension of commercial property.

The value of capital allowances on commercial buildings can vary between 25-65% of any purchase or refurbishment price.

# **DON'T LOSE OUT!**

Of course, the extent of the opportunity depends on the level of the specification.

The main reason allowances are missed on the construction and fit out/ refurbishment of the building is because of the lack of detail in the construction cost information provided by contractors. This information can consist of high level summaries of the works and it is difficult for non-specialists to break down and segregate these costs which can result in lost allowances.

Typically, elements missed in the capital allowances claims include demolitions, alterations and finishes. Also, professional fees associated with plant and machinery on which we are claiming capital allowances are eligible, but are easily forgotten.

### YES! THERE'S MORE!

In addition to this, there is a little-known capital allowances pool called Research and Development Allowances (RDA's). If it can be identified that the purpose of the expenditure on plant and machinery, buildings and IT equipment was for the purpose of R&D, 100% uncapped first year capital allowances can be claimed on this expenditure.

SAY YES!

Let YesTax unlock your hidden qualifying expenditure. We are approachable, proactive and productive.

Our qualified experts will arrange a no obligation call to outline the process and assess the extent of your opportunity - you just have to say **YES!** 

### NO SAVING, NO FEE - YES!

We're flexible, but typically we work on a contingent fee basis. Therefore, if YesTax is unable to identify any saving for you, there is no fee due!
